CLIMATE CHANGE™

Winter Diesel De-Gel/De-Ice Treatment

DESCRIPTION:

Climate Change™ is a diesel fuel cold weather rescue product designed to get you up and running quicker than anything else on the market today. With today's high wax fuel and increasing wax build up at the pick-up tube due to falling out of suspension, **Climate Change™** gets your fuel system flowing again so you won't be stranded in freezing temperatures.

Moisture will freeze at a much higher temperature than diesel fuel will gel. This will cause filter plugging long before gel ups if there is any moisture in the fuel. The de-icing ability in **Climate Change™** will have you up and running in a matter of minutes.

USES:

Climate Change™ can be used in both on and off-road diesel, biodiesel, and kerosene.

When used as directed **Climate Change™** will provide the following benefits:

- Reliquefies gelled fuel
- Un-freezes frozen fuel filters
- Removes moisture
- Helps to prevent algae and bacteria
- Adds lubricity

APPLICATION:

To De-Gel Or De-Ice Diesel Fuel: Add 1 gallon of **Climate Change™** to every 200 gallons of diesel fuel in tank. Remove fuel filters and fill with a 50/50 mixture of **Climate Change™** and diesel fuel and re-install.

To remove moisture or as a maintenance dose use **Climate Change**™ at a rate of 1 gallon to 500 gallons of fuel. **Climate Change**™ may also be used in gasoline to remove moisture.

SPECIFICATIONS:

Density	6.839 lbs./gal at 60 F
Pour Point	<-30° F
Flash Point	97°F
Appearance	Gold
