TNT-WINTER TREAT™

Anti-Gel with De-icer

DESCRIPTION:

TNT-Winter Treat™ is a multi-functional diesel package designed to significantly enhance the cold filter plugging point of middle distillate fuels by modifying and dispersing wax crystals and uses a state of the art de-icer to combat icing problems that are common in new age fuels.

TNT-Winter Treat™ uses the most advanced wax modifiers available to restrict the growth of wax crystals in diesel fuel. This enables the fuel to flow through the fuel lines and fuel filter without restriction.

Icing can also be another problem for equipment operators, especially with today's Ultra Low Sulfur Diesel, or ULSD, and biodiesel. Both have a greater affinity for water than fuels of the past. Because water is used in the desulfurization process, many times these fuels contain moisture before they get to the terminals.

TNT-Winter Treat™ contains an active de-icer designed to fully control these now normal amounts moisture. **TNT-Winter Treat™** not only prevents icing, but also eliminates potential problems with corrosion and bacteria.

USES:

TNT-Winter Treat™ provides the following benefits:

- * Reduces plugging of lines, filters, strainers and nozzles
- * Lowers Pour Point and CFPP up to 20°F
- * Prevents problems with icing
- * Dispersants reduce problems with moisture
- * Inhibits corrosion
- * Stabilizes diesel fuel

APPLICATION:

TNT-Winter Treat™ Treatment ratio is 1 gallon per 3000 gallons of diesel fuel.

***For temperatures below 0°F, or for biodiesel blends up to B15, it is recommended to use **TNT-Winter Treat™** at 1 gallon per 1500 gallons of diesel fuel. ***

SPECIFICATIONS:

| | |
|-------------|--|
| Density | 7.25 lbs./gal |
| Pour Point | <-30° F |
| Flash Point | 115° |
| Appearance | Clear, light amber liquid; aromatic odor |
